# CTK AntiCreak

## Technical characteristics

Size	20*6000 mm.
Weight per 1 ribbon	0.0368 kg.
Rolls in package	1
Length per package	6 m.
SQR.M per pallet	248.64

Self-adhesive sealing tape made of soft and slightly elastic synthetic fabric, designed to reduce squeaks, knocks and rattling of plastic panels and interior elements of the car (for example, dashboard, door panels, etc.).

The tape should be glued between the plastic interior elements, which rub against each other at the point of their connection or at the contact points of the plastic panels and upholstery elements with the metal parts of the car body (for example, with the edges of the door covering panels, luggage compartment lid, rear shelf, etc.). CTK AntiCreak can also be used to reduce the vibrations of connectors and electrical cable bundles.

#### Where to use?

<b>Door</b>	
<b>Hood</b>	
<b>Trunks</b>	
<b>Floor</b>	
<b>Ceiling</b>	
<b>Wheel arches</b>	
<b>Other areas</b>
